Other treatments were given which included paracetamol, antacids, antihistamines, mouth gargles, nasal sprays and topical preparations. The severity-of-illness score for toxic epidermal necrolysis (SCORTEN) was 1 (mortality rate: 3.2%).

**OUTCOME AND FOLLOW-UP**  
After 13 days of hospitalisation, the patient was discharged with signs of improvement. One year posthospitalisation, DNA was extracted from the patient's saliva samples. Genetic testing for HLA was found to be positive for the HLA-B\*75 serotype. Specifically, the patient tested positive for HLA-B\*1521 and was negative for HLA-B\*1502.

### Guideline for Preparing Core Clinical Safety Information on Drugs

- Harmonize Company Core Safety Information (CCSI) by all manufacturers
- Conceptualize Development Core Safety Information (DCSI)

- Minimizing confusion among investigators, prescribers and other healthcare professionals due to inconsistencies between the drug safety information of different countries and manufacturers;
- Facilitating access to important information for making rational clinical decisions;
- Eliminating the diversity of national alert/expedited reporting requirements of different regulators, which result from differences in what constitute unexpected ("unlabelled") adverse drug reactions.

### REPORT OF THE EVENT

To sensitize students of School of Pharmacy and Research, more on Computer Aided Drug Design which has been opted as Elective subjects by some of the B. Pharm. (VIII<sup>th</sup> Sem) students, a series of guest lecture was organized virtually on 21st June to 22d June 2021. Guest speaker for this two days session was Dr. Debanjan Sen, Assistant Professor, BCDA College of Pharmacy & Technology, Hridaypur, Kolkata-127. Basic objective of this Lecture was to sensitize students on “Molecular Modelling and Virtual Screening Techniques” through which students would be able to learn more about the basic techniques and different software’s used in docking. He described about virtual screening, drug likeness screening, pharmacophore mapping with suitable examples. He briefed on pharmacophore-based screening, application of pharmacophore modelling and tools related to docking experiment execution. He explained about different types on Molecular Docking on Second day of his lecture where he discussed about component of docking program with suitable examples and published research paper. He requested students to work on some free software’s available for docking and provided small hands on Training on that. At the end of Lecture series, Dr. Neeraj Upmanyu, Principal, SOPR, thanked Dr. Debanjan Sen for his untiring effort and accepted invitation to deliver the students about the nitty gritty of the subject. He appreciated the effort of Mr. Alka Singh, Assoc. Professor, SOPR and coordinator of this lecture series for this initiative and dedication towards students.

### Components of Docking Program

Typically, protein-ligand docking software consist of two main components which work together:

- 1. Search algorithm**  
Generates a large number of poses of a molecule in the binding site
- 2. Scoring function**  
Rank orders the conformations/poses to distinguish the experimental binding pose from the rest  
Binding affinity =  $E_{wd} + E_{ele} + E_{hyd} + \dots$   
*A balance between: the search space for conformational sampling, scoring function calculation and accuracy is important*

### ABOUT BHOPAL

Bhopal, capital of Madhya Pradesh combines scenic beauty, historicity and modern urban planning. It is situated on the site of an 11th century city, Bhojapal, founded by Raja Bhoj. Bhopal today presents a multi-faceted profile; the old city with its teeming market places and fine old mosques and palaces still bear the aristocratic imprint of its former rulers; among them the succession of powerful Begums who ruled Bhopal from 1819 to 1926. Equally impressive is the new city with its verdant, exquisitely laid out parks and gardens, broad avenues and streamlined modern edifices.

### SIGNIFICANCE OF PROGRAM

Artificial Intelligence can also make major contributions to the further incorporation of the developed drug in its correct dosage form as well as its optimization, in addition to aiding quick decision-making, leading to faster manufacturing of better-quality products along with assurance of batch-to-batch consistency. Artificial Intelligence can also contribute to establishing the safety and efficacy of the product in clinical trials, as well as ensuring proper positioning and costing in the market through comprehensive market analysis and prediction. Although there are no drugs currently on the market developed with AI-based approaches and specific challenges remain with regards to the implementation of this technology, it is likely that Artificial Intelligence will become an invaluable tool in the pharmaceutical industry in the near future.

ARTIFICIAL INTELLIGENCE IN DRUG DEVELOPMENT

Artificial intelligence (AI) is poised to advance the design, characterization, and manufacturing of drug delivery Nano systems. Further, the power of big data is becoming a relevant tool to accomplish reverse engineering and continuous optimization of these systems.

The implementation of AI in the R&D and manufacturing of drug delivery systems is covered, focusing on pharmaceutical development and close to-market applications.

AI and machine learning are part of our daily lives, from Siri to facial recognition. However, they can save lives by accelerating the development of new and better disease treatments.

The role of Artificial intelligence in drug discovery is expected to grow in the market.

4 STRENGTHS OF AI IN DRUG DEVELOPMENT

- COST EFFECTIVE**  
With a lot less wastage on experimental reagents, AI can be expected to save a lot of money.
- SPEEDY**  
AI provides near-instant speed in drug development, leading to multiple benefits.
- INNOVATIVE**
